
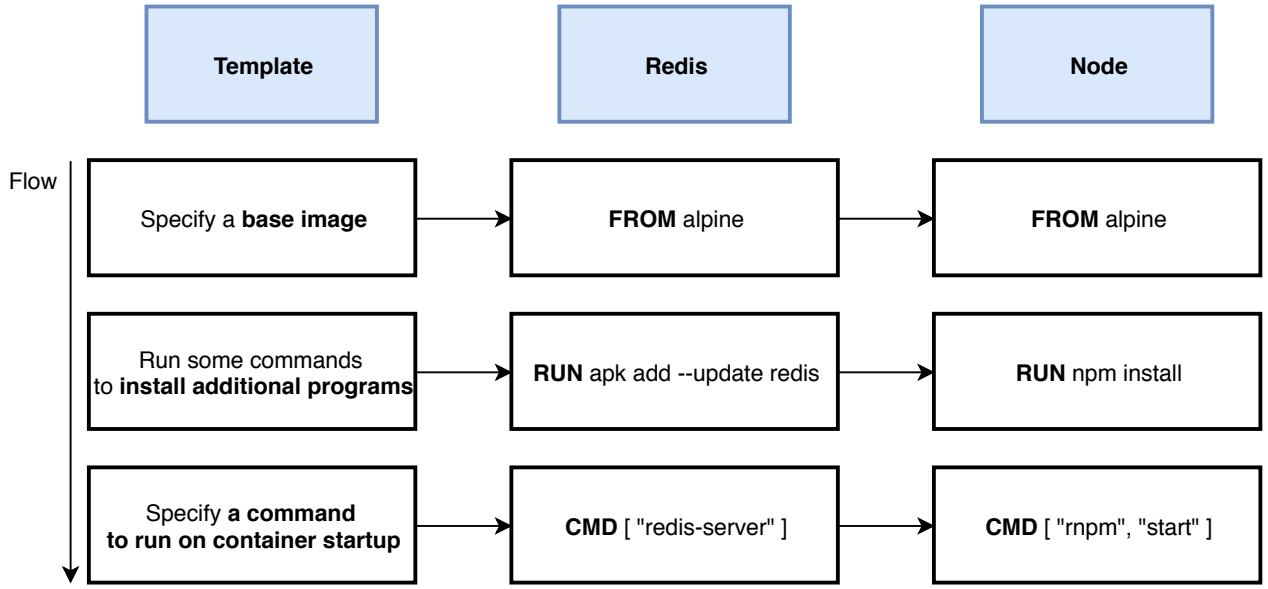
Creating a Dockerfile

Steps

- Create a new node JS web app
- Create a Dockerfile.
- Build an image from Dockerfile.
- Run the image as a container.
- Connect a web app from a browser

Node JS Apps

- Have to install dependencies before running the app. → Install deps by **'npm install'**
- Have to run a command to start up the server. → Start server by **'npm start'**



Copy missing files
