Real Project along with Docker

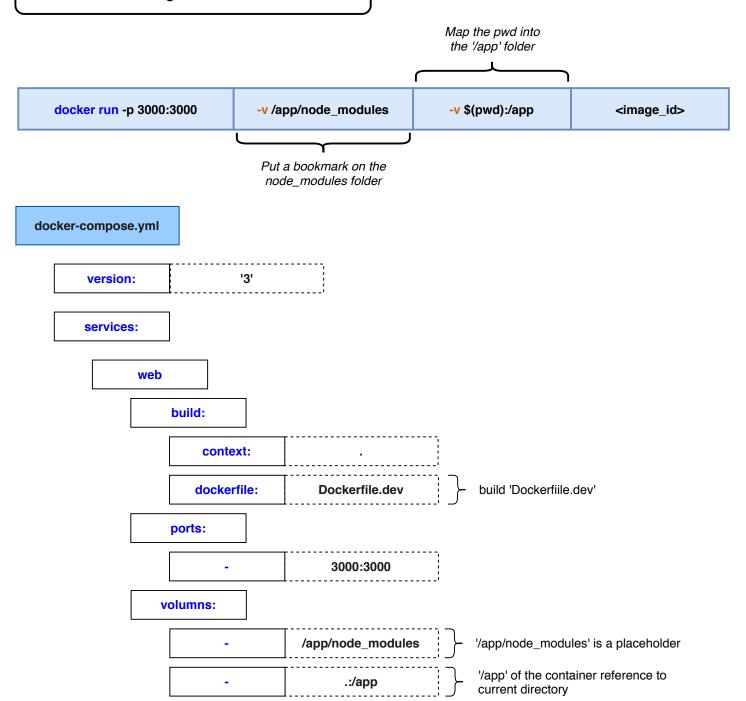

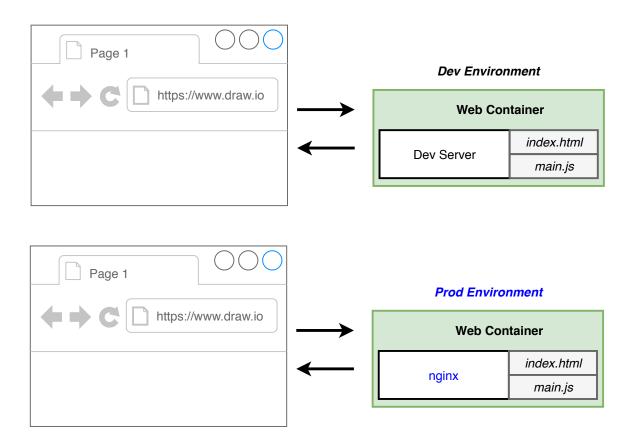

files/folders to use for the build

In development, to make code changes into inside of container

	In test,				
to test docke	er once				
docker	run	-it	< Image name >	npm run test	
to test docke	er according to chan g	ged test sour	ce codes	overried command	d
docker-compose	e up		build docker-compose and ru		un
docker	ps		Identify the running container ID by another terminal		
docker	exec	-it	< container ID >	npm run test	
• to test changed		o changed tes	t source codes t source codes to run & build do	overried command	d
services:			docker-compose upbuild		build
	web:				1
	tests:	_			
	build:				
	conte	xt:			
	docker	file:	Dockerfile.dev	build 'Dockerfiile.de	v '
	volumns:				
	_	/a	pp/node_modules	- '/app/node_modules	' is a placeholder
	-		.:/app	_ '/app' of the containe current directory	er reference to
	command:	["npm", "	'run", "test"] } //ap	p/node_modules' is a pl	aceholder

In production,

multi configuration of build for production

Dockerfile for multi step builds
